

All Colorado Radon Mitigation, Inc

Locally and family owned mitigation company seeks an installation technician to install radon mitigation systems in commercial and/or residential properties.

Basic construction experience (plumbing, electrical and tool knowledge) is required. Job includes daily ladder work, heavy lifting and some confined space work. We really need candidates who understand the construction industry and the mindset it takes to accomplish physically demanding tasks on a schedule.

Schedule is Monday thru Friday, No Weekends and No Holidays. Technician's do not have a limited number of days off. Techs may take off (within reason) as many days during the year as they wish, unpaid, with fair notice. We do offer 3 days paid vacation after 90 days of employment.

Company vehicle and all tools provided. Full training provided, 3-5 weeks. Training is paid hourly - Once complete you move to a per diem type pay scale. (See below)

The right candidate will learn a new trade while earning a decent wage (\$50K+/- yearly). Clean Background and Clean Driving Record a must. We will be checking. Looking for a long term employee, not looking for candidates who want work until their pre-pandemic job comes back.

This is a mostly unsupervised position, so responsible and clean looking candidates are extremely preferred. Technician's who complete one job per day (which is all we require, but you can complete 2 in a day for more \$\$) typically don't work past 2pm!! Two jobs a day will get you a full days work and double your daily rate.

****This is not an hourly job**** Techs are paid on a per diem scale, which will be calculated based on experience. This means when your work is done, you go home. Whether that takes you 4 hours or 6 hours is up to you.

We have a great crew of people working here right now, come apply and see if you're a good fit. Looking forward to meeting you! Thanks!

Job Type: Full-time

Pay: \$18.00 - \$25.00 per hour
